Niles Stainless Steel Chilled Water Buffer Tanks use quality stainless steel construction to be strong, durable and resistant to corrosion. Available in a variety of capacities from 130 gallon through 1000 gallons and larger. Customize to the specs and capacity you need.

Stainless Steel Chilled Water Buffer Tanks

Niles Stainless Steel Chilled Water Buffer Tanks use quality stainless steel construction to be both strong and durable and also resistant to corrosion. These tanks are designed for use with commercial chiller water systems and hydronic heating systems and can increase the system's capacity to stabilize water temperatures. The tanks are available in a variety of capacities from 130 gallon through 1000 gallons and larger. They can be customized to the specs and capacity you need.
