Niles Steel Tank Bulletin

INFORMATION: RightSpec® Indirect Water Heater Performance Calculator

Dear Valued Customer,

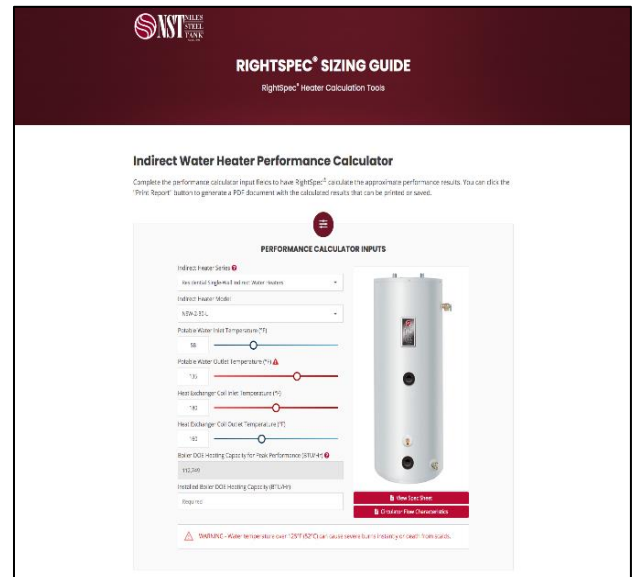

Niles Steel Tank is pleased to announce the latest addition to its suite of RightSpec® Product Tools. The Niles indirect water heater performance calculator has been added to our [RightSpec® Sizing Guide](#).

This simple yet effective feature allows for specifiers, contractors, and even end-users to better understand the performance and system compatibility of our Niles indirect water heaters. Whether you are looking to specify a product for a new installation or updating an existing system, the program is designed to handle a wide array of applications. Simply enter the parameters specific to your application and you will be provided with the performance results to help you determine which indirect water heater will best suit your needs.

Parameters Required:

- Potable Water Inlet Temperature
- Potable Water Outlet Temperature
- Heat Exchanger Coil Inlet Temperature
- Heat Exchanger Coil Outlet Temperature
- Installed Boiler DOE Heating Capacity (BTU/Hr.)

Just like the rest of the RightSpec® program, it is loaded with tips and features to make sizing for an indirect water heater easier than ever. In addition, you can export the results into a user-friendly report that can be shared or saved for future reference.

There is no sign-up required or program to download. You get real-time solutions and can feel confident that when you use RightSpec®, you are correctly specifying your Niles Steel Tank products the first time!

If you have any questions or require additional information, please contact Niles Steel Tank, at 269-683-1910 or info@nilessteeltank.com.
