PRODUCT CHANGE: Manufactured (Mobile) Home Gas Water Heater Improvements

Dear Valued Customer,

In the coming weeks, Bradford White will transition from a mechanical control to a new version of the electronic ICON System® control on our manufactured (mobile) home gas water heaters.

This change will impact the atmospheric vent and direct vent models outlined below:

	Atmospheric Vent	RG2MH30T
		RG2MH40T
	Direct Vent	RG2DVMH30T
		RG2DVMH40T

This new ICON System® control is the first of its kind offering built-in field convertibility. The control includes a regulator, located behind the orange cap, that is used when the water heater needs to be field converted from LP to natural gas. The water heaters themselves also ship with the alternate orifice and pilot assembly - no additional parts needed for fuel conversion!

This new control also provides you with all the great features you have come to appreciate about the ICON System® including:

- Enhanced performance
- Advanced temperature control system
- Intelligent diagnostics

This field convertibility allows wholesalers and installers to reduce their inventory and offer their customers with a solution regardless of gas type present at the property.

The new control is backward compatible and can be installed on existing Bradford White manufactured (mobile) home water heaters. Please see the <u>Parts Counter Update</u> and <u>PIM data</u> for applicable service kit information.

If you have any questions or require additional information, please contact <u>your local Bradford</u> <u>White Representative</u>.
